Windows 11 ohne Kontozwang

<https://www.tomshardware.com/how-to/install-windows-11-without-microsoft-account>

Beim Schirm "Land auswählen" wird die Netzverbindung per CMD über Shift + F10 getrennt

Danach folgt Neustart, dann nochmal CMD und mit ipconfig /release die Verbindung trennen. Danach weiter mit der Sprachauswahl, Keyboard usw. Dann statt "lets connect to a network" den Menüpunkt "I don't have Internet" wählen. Danach kann man ein lokales Konto anlegen.

Tail und Logfiles

tail Ersatz:

```
Get-Content ./log.log -Wait -Tail 10
```

gets the last 10 lines of the file and waits for more

Tail, Grep und Pipe in Datei:

```
"Get-Content .\InDia_debug.log -Wait -Tail 10 | Select-String -Pattern 'appdynamics' | out-file 'appdyn_fusoko.log'"
```

Grosse Dateien suchen

< 1 GB

```
//forfiles /S /M * /C "cmd /c if @fsize GEQ 1073741824 echo @path> largefiles.txt//
```

Windows Defender auf der Kommandozeile

Quick scan in einem Verzeichnis

```
<font inherit/inherit;#800000;;inherit>"%ProgramFiles%\Windows Defender\MpCmdRun.exe"</font> <font inherit/inherit;;pink;;inherit>-</font>Scan <font inherit/inherit;;pink;;inherit>-</font>ScanType 1 <font
```

```
inherit/inherit;;#FF0000;;inherit>-File</font> <font
inherit/inherit;;#800000;;inherit>"D:\Folder\Path"</font>
```

Full scan

```
<font inherit/inherit;;#800000;;inherit>"%ProgramFiles%\Windows
Defender\MpCmdRun.exe"</font> <font inherit/inherit;;pink;;inherit>-
</font>Scan <font inherit/inherit;;pink;;inherit>-</font>ScanType 2 <font
inherit/inherit;;#FF0000;;inherit>-File</font> <font
inherit/inherit;;#800000;;inherit>"D:\Folder\Path"</font>
```

Bootsektor scannen

```
<font inherit/inherit;;#800000;;inherit>"%ProgramFiles%\Windows
Defender\MpCmdRun.exe"</font> <font inherit/inherit;;pink;;inherit>-
</font>Scan <font inherit/inherit;;pink;;inherit>-</font>ScanType
BootSectorScan
```

Network location settings

Registry:

```
HKEY_LOCAL_MACHINE/SOFTWARE/Microsoft/Windows
NT/CurrentVersion/NetworkList/Profiles
```

Category Reg_DWORD

0 = public, 1 = work, 2 = domain

Setting network profile with PowerShell:

```
Get-NetConnectionProfile
```

See the network name you want to change its type and run the following command:

```
Set-NetConnectionProfile -Name "ITT" -NetworkCategory Public
```

Where ITT is the name of your network and you can change the -NetworkCategory switch value to Public or Private.

netsh Befehle

Kontexte

```
dhcpclient dhcp nap hra http interface nps ipsec nap bridge netio nps ras
```

routing rpc advfirewall winhttp wins winsock lan wlan

Windows Server: The netsh routing context is available only on a computer running Windows Server that has the Routing and Remote Access Service installed. It is not available on a computer running a client version of Windows.

Proxy

Proxy lesen

```
netsh winhttp show proxy
```

Proxy setzen

```
netsh winhttp set proxy
```

Proxy Setting aus IE importieren

```
import proxy source =ie
```

Proxy zurücksetzen (Direktverbindung)

```
netsh reset proxyreset proxy
```

Disable Master Browser

HKey_Local_MachineSystemCurrentControlSetServicesBrowser Parameters.

Default is Auto, set to "false"

SMB2 - Gastanmeldungen zulassen

In Win 10 sind anonyme SMB2 Shares deaktiviert. Eine Gruppenrichtlinie erlaubt sie wieder.
